I 897 PREVIOUS UNCLASSIFIED CONFIDENTIAL SECRET

The Change Detector when delivered in October 1964 required a number of critical adjustments that should have been first made at the factory, but were not because they would have to be repeated at destination. During tune-up at destination, extending over a period of some three months, it was found that some improvement and/or replacement of piece parts and circuitry was necessary to attain the desired performance. During November it became apparent that an authorized overrun in time and funds was required if the machine was to be put in top performance condition.  In a letter from dated 3 December 1964, an overrun in time and funds was required. The amount of time and funds was increased to 31 March 1965 and in a message from dated 4 January 1965.  Since 1 January 1965, approximately 197 man hours by engineers has been expended on this item, and approximately 200 man hours work remains to be accomplished. I have been informed that all drawings, and operation and maintenance manuals will be completed and delivery set at 31 March 1965.	a number of critical adjustments that should have been first made at the factory, but were not because they would have to be repeated at destination. a number of critical adjustments that should have been first made at the factory, but were not because they would have to be repeated at destination. During tune-up at destination, extending over a period of some three months, it was found that some improvement and/or replacement of piece parts and circuitry was necessary to attain the desired performance. During November it became apparent that an authorized overrun in time and funds was required if the machine was to be put in top performance condition.  In a letter from dated 3 December 1964, an overrun in time and funds was required. The amount of time and funds was increased to 31 March 1965 and from dated 4 January 1965.  Since 1 January 1965, approximately 197 man hours by engineers has been expended on this item, and approximately 200 man hours work remains to be accomplished. I have been informed that all drawings, and operation and maintenance manuals will be completed and delivery set at	a number of critical adjustments that should have been first made at the factory, but were not because they would have to be repeated at destination. ## Approved For lease 2002/01/10 : CIA-RDP78B04747 02600010027-4

The Change Detector arrived at the Center on 2 October 1964. The only work which remains to be completed is the assembly of the major components and the final tune-up and testing. This will be done during the week beginning 5 October 1964. The final report, the operation and maintenance manuals, the final assembly drawings and the circuit schematics have not been delivered.
